

ELECTRIFY YOUR COMMUNITY WITH EV CHARGING

Future-proof your building with smart EV charging solutions for condos and apartments.

The market for plug-in electric vehicles grows every month – and with it, the need for more places to charge. Residents are increasingly requesting electric vehicle charging stations be available in the multi-family properties they call home – or want to call home. ~90% percent of EV charging happens at home, which makes it critical for multi-unit dwellings to include EV charging stations.

EV charging for apartments & other multi-unit dwellings, like condos and co-ops, needs to include charging solutions to keep up with this fast-changing electric vehicle market. By intelligently allocating power among EV chargers we're generally able to use the existing power available in older developments and increase a property's charging capacity. Sustainability is a powerful marketing tool that can be used to attract new residents to multi-family developments. Providing EV charging is a top priority for developers creating today's multi-family homes.

EVSE Benefits Include:

Attracting and retaining eco-conscious residents

Increasing property values

Providing a sought-after amenity that EV driving residents and their visitors need

Being green, which projects a powerful sustainable image to the community

LEED (Leadership in Energy & Environmental Design) points

Differentiating your property

Charge Forward With EVUnited.

Wanting to learn more about EV charging?

EVUnited offers complimentary consultations and onsite assessments to those interested in learning about EV charging.

Our team will provide you with a quote for the equipment, installation, site make-ready, utility coordination, and assist in pursuing available grants/rebates.

Schedule your complimentary consultation & site assessment today!
